ACADEMIC/PERSONAL PROJECT

Audio Player

Technologies: **React js, Spring Boot.**

I developed an audio player project utilizing React.js and Spring Boot. The application provides a user-friendly interface for playing audio files and managing playlists. The frontend, built with React.js, offers a responsive and intuitive design, allowing users to browse, select, and play their favorite tracks easily. The backend, powered by Spring Boot, handles the server-side functionalities such as file storage, database management, and API integration. This application provides

- User authentication
- Users can start or pause the playback of audio files at any time.
- Users can navigate through the playlist or collection of audio files by moving to the next or previous track.
- Users can adjust the volume level of the audio player to their preference.
- Users can search for specific tracks or artists within their library or the available collection.
- Users can mark specific tracks or create a list of favorite songs for quick access in the future.

Expense Tracker

Technologies: **React js, Redux js.**

Expense tracker is expense visualizer that helps to store expenses list of every year. Analyzing last year's expenses people can save their money, plan for the future, and see all your finances in one place. By this application,

- User also can add their expenses.
- User can edit their expenses title, amount.
- User can filter out according to year

Quiz Application

Technologies: **React js, Firebase**

Any user can evaluate yourself by this Quiz application. There are many kinds of questions based on different topics. Anyone can attend this quiz and this application provide multiple choose questions. For this application authentication data will be saved in firebase.

- User can log in and sign up for accessing in this application.
- User can attend any kind of quiz.
- If user complete their quiz they will be able to see their result.
